

CLAIMS

What is claimed is:

1. A Velcro fastener belt, including a fastener belt mainly made up of warp yarns, weft yarns, and sewing threads interwoven synchronically into a belt body wherein the warp yarns are equidistantly interwoven with every two or more than two weft yarns and the sewing threads are synchronically interwoven with the warp yarns and every one or more than one weft yarns to form a patterned surface of consecutive arcs disposed at one side of the belt body for decorative effect and a tightly woven lint-like surface brushed with circular hairy pile disposed at the other side of the belt body for fastening thereof; the fastener belt tightly woven by the sewing threads and the warp and the weft yarns is greatly strengthened in structure, anti-friction, and pulling power, effectively preventing threads from coming or breaking off easily in the napping operation thereof.
2. The Velcro fastener belt as claimed in Claim I wherein the sewing threads have a plurality of tying holes equidistantly disposed thereon for the warp yarns to be led there-through in weaving.
3. The Velcro fastener belt as claimed in Claim I wherein the sewing threads have a plurality of interlaced tying sections equidistantly disposed thereon for the warp yarns to be interwoven therewith in weaving.
